

# qwen3-8b: inside target verify and native AR, at every context

■ Full attention    ■ Routed expert loop    ■ Shared expert    ■ LM head  
■ GDN mixer    ■ MoE router    ■ MoE wrapper    ■ Outside target modules  
■ Dense FFN

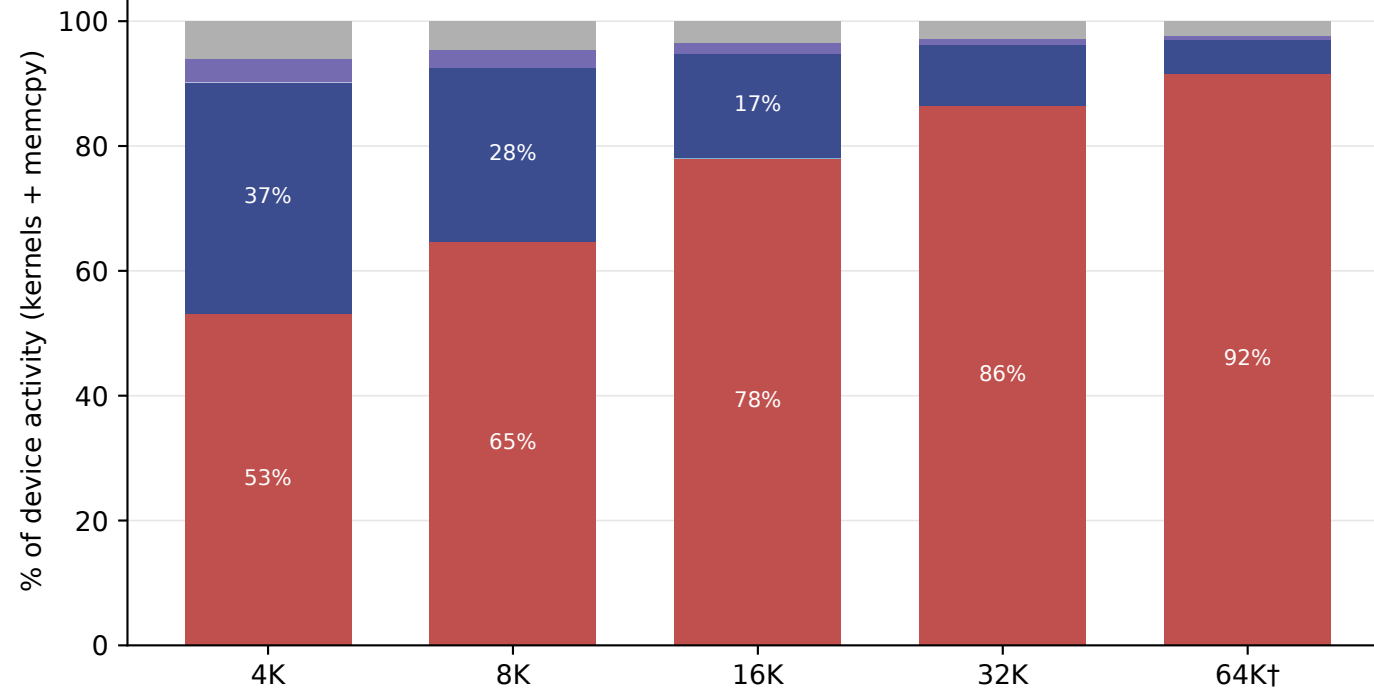

## DFlash verify · module execution time

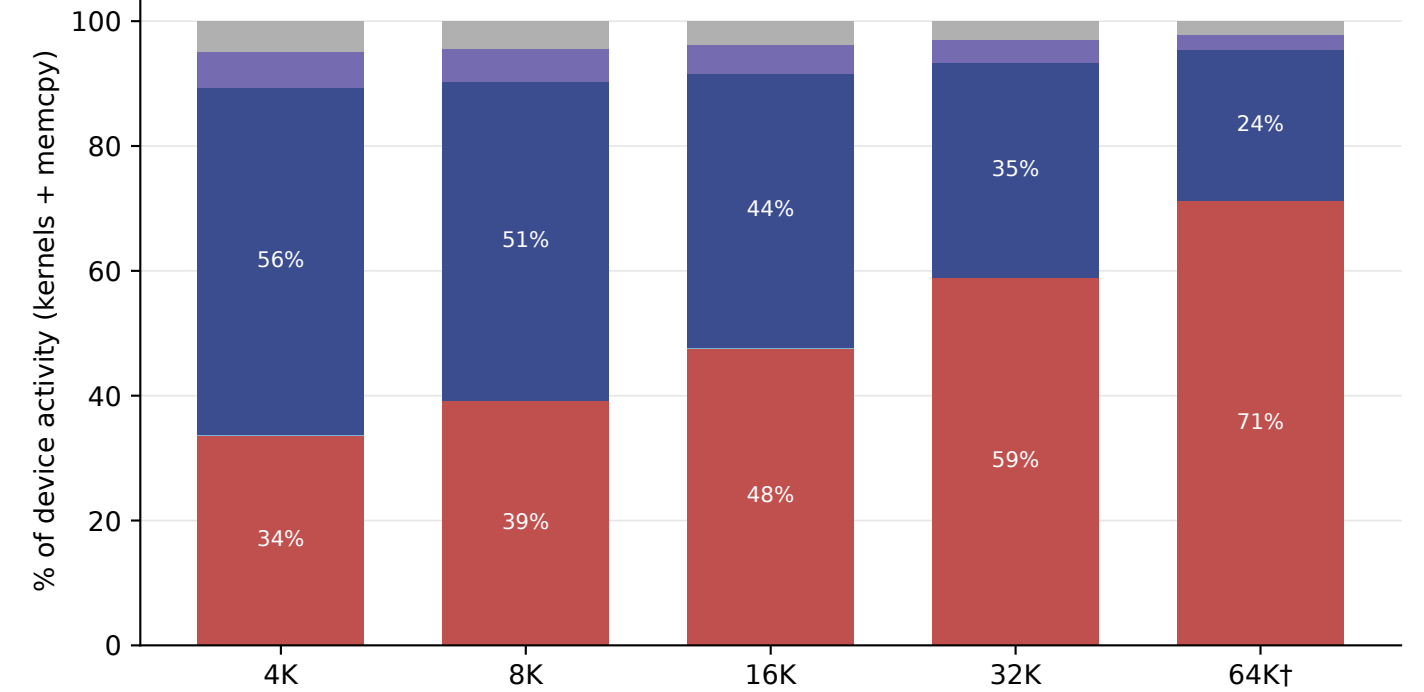

## AR step · module execution time

## DFlash verify · module shares

## AR step · module shares

Trace device activity / profiled occurrence, summed over devices; module stacks include kernels AND memcp events.  
 Shares are fractions of target device activity, not request wall latency. Black ticks = separate perf intervals.  
 Trace samples the beginning of decode; ratios or gaps against perf are not utilization or measured CPU time.
