

qwen3.5-35b-a3b: inside target verify and native AR, at every context

- Full attention
- Routed expert loop
- Shared expert
- LM head
- GDN mixer
- MoE router
- MoE wrapper
- Outside target modules
- Dense FFN

Trace device activity / profiled occurrence, summed over devices; module stacks include kernels AND memcp events.
Shares are fractions of target device activity, not request wall latency. Black ticks = separate perf intervals.
Trace samples the beginning of decode; ratios or gaps against perf are not utilization or measured CPU time.
