

qwen3.5-9b: inside target verify and native AR, at every context

■ Full attention ■ Routed expert loop ■ Shared expert ■ LM head
■ GDN mixer ■ MoE router ■ MoE wrapper ■ Outside target modules
■ Dense FFN

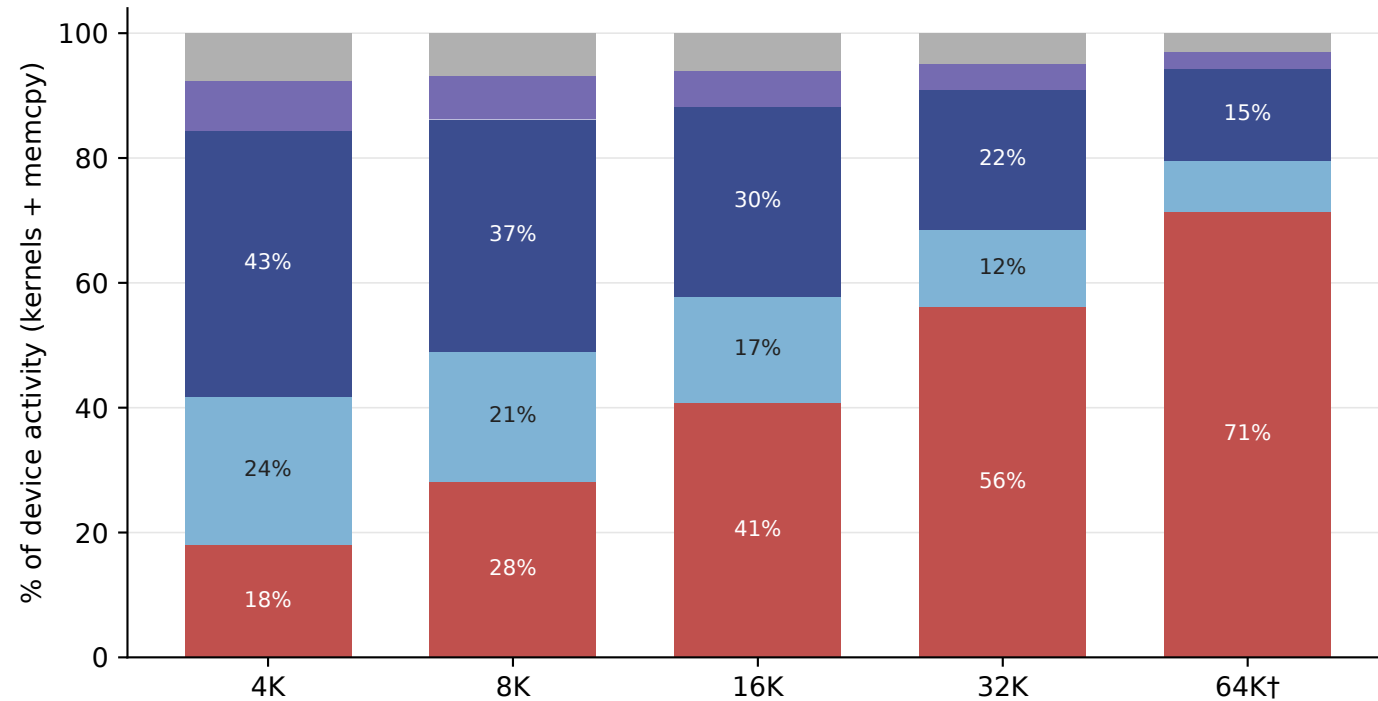

DFlash verify · module execution time

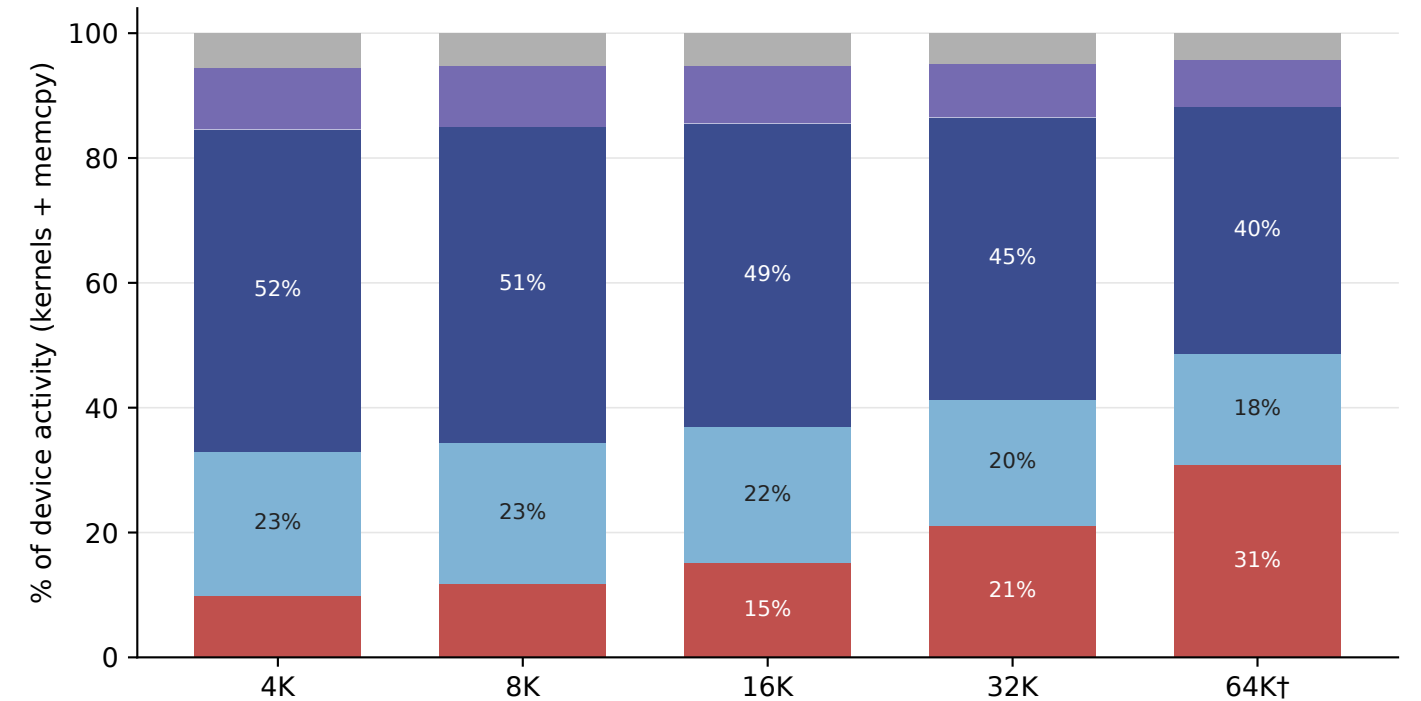

AR step · module execution time

DFlash verify · module shares

AR step · module shares

Trace device activity / profiled occurrence, summed over devices; module stacks include kernels AND memcp events.
 Shares are fractions of target device activity, not request wall latency. Black ticks = separate perf intervals.
 Trace samples the beginning of decode; ratios or gaps against perf are not utilization or measured CPU time.
