

Rollback correctness: stock state and replay evidence

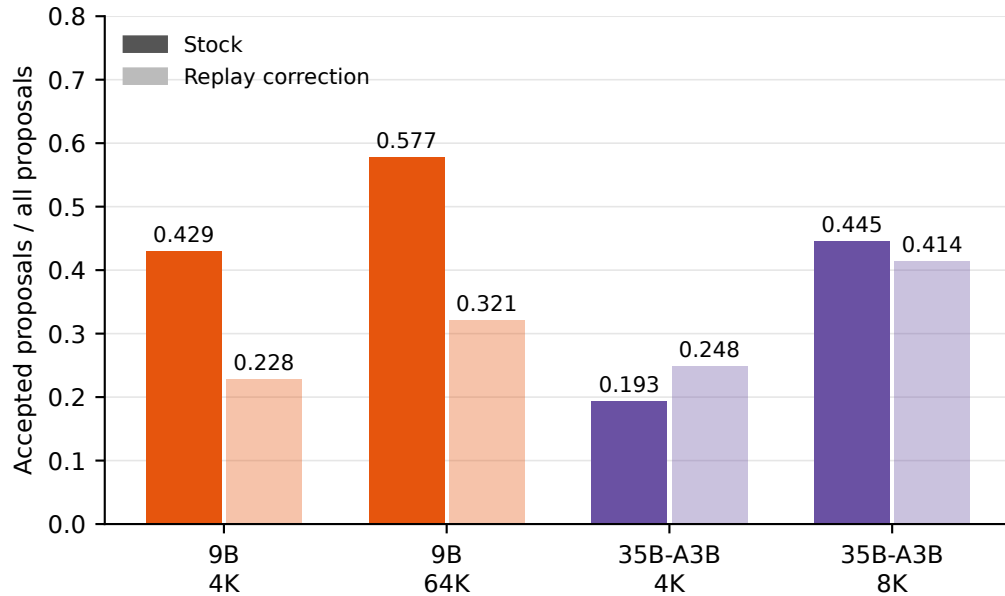

A Rollback probe: recurrent state stays different

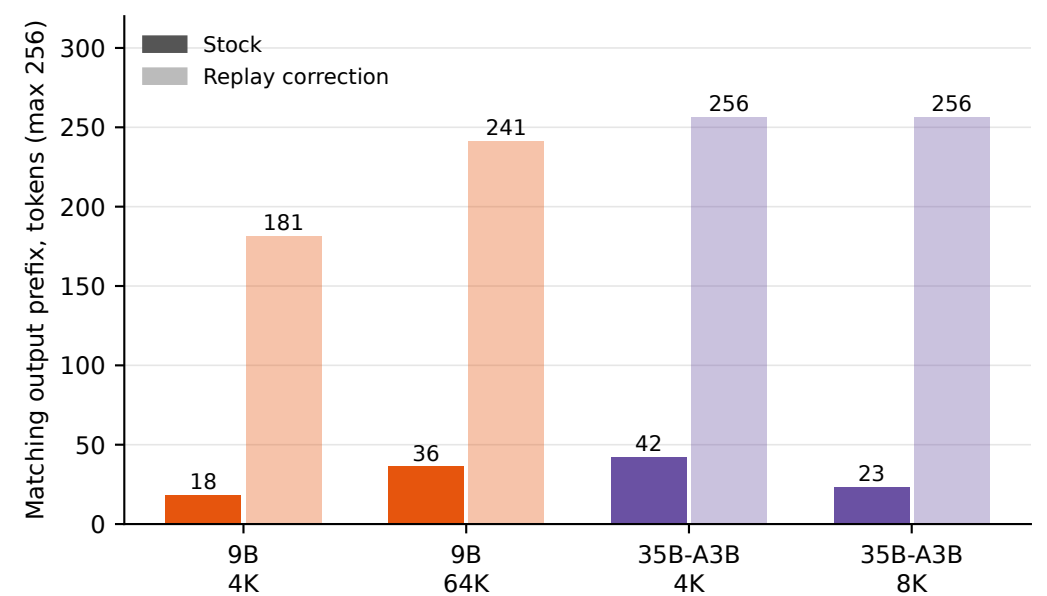

B Next-token probe logits also change

C Legacy acceptance changes in either direction

D Legacy common prefix with native AR

Correctness evidence: RB9 (prompt 512, block 16) and separate 2026-09-29 legacy FLA audits L9/L35.
Legacy acceptance is never combined with v2 timings. Replay-labelled paths do not guarantee AR agreement.
The shadow audit is not an independent full-cache oracle; remaining numerical differences require controls.
